**PHYSICS**

9702/12

Paper 1 Multiple Choice

May/June 2021

1 hour 15 minutes

You must answer on the multiple choice answer sheet.

You will need: Multiple choice answer sheet  
Soft clean eraser  
Soft pencil (type B or HB is recommended)

---

**INSTRUCTIONS**

- There are **forty** questions on this paper. Answer **all** questions.
- For each question there are four possible answers **A**, **B**, **C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do **not** use correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.

**INFORMATION**

- The total mark for this paper is 40.
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.

---

This document has **20** pages. Any blank pages are indicated.

**Data**

|                              |  |
|------------------------------|--|
| speed of light in free space | $c = 3.00 \times 10^8 \text{ m s}^{-1}$  |
| permeability of free space   | $\mu_0 = 4\pi \times 10^{-7} \text{ H m}^{-1}$   |
| permittivity of free space   | $\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$<br>$(\frac{1}{4\pi\epsilon_0} = 8.99 \times 10^9 \text{ m F}^{-1})$ |
| elementary charge            | $e = 1.60 \times 10^{-19} \text{ C}$   |
| the Planck constant          | $h = 6.63 \times 10^{-34} \text{ J s}$   |
| unified atomic mass unit     | $1 \text{ u} = 1.66 \times 10^{-27} \text{ kg}$  |
| rest mass of electron        | $m_e = 9.11 \times 10^{-31} \text{ kg}$  |
| rest mass of proton          | $m_p = 1.67 \times 10^{-27} \text{ kg}$  |
| molar gas constant           | $R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$   |
| the Avogadro constant        | $N_A = 6.02 \times 10^{23} \text{ mol}^{-1}$   |
| the Boltzmann constant       | $k = 1.38 \times 10^{-23} \text{ J K}^{-1}$  |
| gravitational constant       | $G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$   |
| acceleration of free fall    | $g = 9.81 \text{ m s}^{-2}$  |

**Formulae**

|                                |  |
|--------------------------------|--|
| uniformly accelerated motion   | $s = ut + \frac{1}{2}at^2$<br>$v^2 = u^2 + 2as$                  |
| work done on/by a gas          | $W = p\Delta V$  |
| gravitational potential        | $\phi = -\frac{Gm}{r}$   |
| hydrostatic pressure           | $p = \rho gh$  |
| pressure of an ideal gas       | $p = \frac{1}{3} \frac{Nm}{V} \langle c^2 \rangle$               |
| simple harmonic motion         | $a = -\omega^2 x$  |
| velocity of particle in s.h.m. | $v = v_0 \cos \omega t$<br>$v = \pm \omega \sqrt{(x_0^2 - x^2)}$ |
| Doppler effect                 | $f_o = \frac{f_s v}{v \pm v_s}$                                  |
| electric potential             | $V = \frac{Q}{4\pi\epsilon_0 r}$                                 |
| capacitors in series           | $1/C = 1/C_1 + 1/C_2 + \dots$                                    |
| capacitors in parallel         | $C = C_1 + C_2 + \dots$  |
| energy of charged capacitor    | $W = \frac{1}{2}QV$  |
| electric current               | $I = Anvq$   |
| resistors in series            | $R = R_1 + R_2 + \dots$  |
| resistors in parallel          | $1/R = 1/R_1 + 1/R_2 + \dots$                                    |
| Hall voltage                   | $V_H = \frac{BI}{ntq}$   |
| alternating current/voltage    | $x = x_0 \sin \omega t$  |
| radioactive decay              | $x = x_0 \exp(-\lambda t)$                                       |
| decay constant                 | $\lambda = \frac{0.693}{t_{\frac{1}{2}}}$                        |

1 What is **not** a reasonable estimate of the physical property indicated?

- A  $2 \times 10^3 \text{ W}$  for the power dissipated by the heating element of an electric kettle ✓
- B  $4 \times 10^2 \text{ m}^3$  for the volume of water in a swimming pool
- C  $5 \times 10^5 \text{ N s}$  for the momentum of a lorry moving along a road
- D  $6 \times 10^2 \text{ N}$  for the weight of a fully grown racehorse *which is definitely not of mass of 60kg*

2 Which quantity could have units of  $\text{N m V}^{-1}$ ?

- A acceleration *force =  $\text{N kg}^{-1}$*
- B charge *Force =  $\frac{V}{d}$   
 $Q = \frac{F d}{V} = \text{N m V}^{-1}$*
- C current =  $nAvq = \text{m}^3 \times \text{m}^{-2} \times \text{ms}^{-1} \times \text{As} = \text{A}$
- D resistance  $\text{VA}^{-1}$

3 An object is acted upon by two forces, 10 N in the vertical direction and 6 N at  $40^\circ$  to the vertical, as shown.

Vertical resultant =  $5.404 \text{ N}$  upwards  
Horizontal resultant =  $3.86 \text{ N}$  right

What is the resultant force acting on the object?

- 4 An analogue ammeter with a range of 0–250 mA is connected into an electrical circuit. The diagram shows the ammeter's display.

What is the reading on the ammeter?

- A 76 mA     B 165 mA     C 183 mA     D 190 mA

- 5 Students take readings of the volume of a liquid using three different pieces of measuring equipment X, Y and Z.

The true value of the volume of the liquid is  $V$ .

The students' results are shown.

How many pieces of equipment are precise and how many are accurate?

|                                       | number of precise pieces of equipment | number of accurate pieces of equipment |
|---------------------------------------|---------------------------------------|--|
| A                                     | 1                                     | 1                                      |
| B                                     | 1                                     | 2                                      |
| C                                     | 2                                     | 1                                      |
| <input checked="" type="checkbox"/> D | 2                                     | 2                                      |

*if the average of all readings is closer to the true value which is true with X & Z because their volume averages might be near*

*how close are readings to each other? In case of Y & Z, the volume readings are not spread too much so Y & Z are precise*

*Y & Z*      *X & Z*

6 Which graph shows the variation with time  $t$  of the velocity  $v$  of an object falling vertically downwards in a vacuum? with no air resistance so constant acceleration

$v = u + at$   
 so  $t = \frac{v-u}{a}$   
 $t = \frac{0 - V \sin \theta}{-g}$   
 $= \frac{V \sin \theta}{g}$

time taken to reach highest point which means total time taken in horizontal direction is  $2 \frac{V \sin \theta}{g}$

7 A projectile is fired from point P with velocity  $V$  at an angle  $\theta$  to the horizontal. It lands at point Q, a horizontal distance  $R$  from P. Air resistance is negligible.

Horizontal speed stays constant through hole ALWAYS

The acceleration of free fall is  $g$ .

Which equation for  $R$  is correct?

- A  $R = \frac{V^2 \sin \theta \cos \theta}{g}$
- B**  $R = \frac{2V^2 \sin \theta \cos \theta}{g}$
- C  $R = \frac{V^2 \sin \theta \cos \theta}{2g}$
- D  $R = \frac{V^2 g \sin \theta \cos \theta}{2}$

Horizontal distance = horizontal speed  $\times$  time

$R = V \cos \theta \times \frac{2V \sin \theta}{g}$

$R = \frac{2V^2 \sin \theta \cos \theta}{g}$

- 8 A book of weight  $W$  is at rest on a table. A student attempts to state Newton's third law of motion by saying that 'action equals reaction'.

If the weight of the book is the 'action' force, what is the 'reaction' force?

- the force  $W$  acting downwards on the Earth from the table  
 the force  $W$  acting upwards on the book from the table  
 the force  $W$  acting upwards on the Earth from the book  
 the force  $W$  acting upwards on the table from the floor

- 9 Four balls are dropped at the same time from the top of a very tall tower. There is no wind blowing. so same acceleration & now it all depends on the density of balls

Which ball hits the ground first?

A  
  
 mass  $M$   
 diameter  $D$

B  
  
 more dense  
 mass  $4M$   
 diameter  $D$

  
 mass  $M$   
 diameter  $2D$

  
 mass  $4M$   
 diameter  $2D$

the greater the surface area, the smaller the speed just like in the case of parachutist

10 A nitrogen molecule P travelling at a speed of  $320 \text{ ms}^{-1}$  in a vacuum collides with a stationary nitrogen molecule Q.

After the collision, P travels at a velocity of  $180 \text{ ms}^{-1}$  at an angle of  $55^\circ$  to its original path.

Q travels in a direction at an angle of  $34^\circ$  to the initial path of P.

Total momentum bfr collision along y-axis = 0

Total momentum aft collision along y-axis :

$$(M_P \times 180 \sin 55^\circ) + (M_Q \times v \sin 34^\circ)$$

$$180 \sin 55^\circ M_P = v \sin 34^\circ M_Q \text{ so } \frac{180 \sin 55^\circ M_P}{M_Q \sin 34^\circ} = v$$

$$u = 320 \text{ ms}^{-1}$$

$$u = 0$$

$$M_P = M_Q$$

mass of a  $\text{N}_2$  molecule  
 $= 2 \times 14 \times 1.67 \times 10^{-27}$   
 $= 4.676 \times 10^{-26} \text{ kg}$

$$v = \frac{180 \sin 55^\circ}{\sin 34^\circ}$$

Total momentum bfr collision along x-axis =  $M_P \times 320$

Total momentum aft collision along x-axis =  $(M_P \times 180 \cos 55^\circ) + (M_Q \times v \cos 34^\circ)$

before collision

after collision

Assume that there are no external forces acting on the molecules.

What is the magnitude  $v$  of the velocity of Q after the collision?

- A  $120 \text{ ms}^{-1}$     B  $140 \text{ ms}^{-1}$     C  $180 \text{ ms}^{-1}$     **D  $260 \text{ ms}^{-1}$**

11 A charged particle is placed in a uniform field of force. The direction of the force on the particle is opposite to the direction of the field.

*+ve to -ve ALWAYS*

What is the field and what is the charge on the particle?

|              | field         | charge on particle    |
|--------------|---------------|-----------------------|
| <b>A</b>     | electric      | negative              |
| <del>B</del> | electric      | positive <del>X</del> |
| <del>C</del> | gravitational | negative              |
| <del>D</del> | gravitational | positive <del>X</del> |

*would be in the same direction as that of field*

- 12 A disc of radius  $r$  is acted upon by two opposite forces, each of magnitude  $F$ . The forces form a couple, as shown.

What is the  $F \times 2r$  torque of this couple?

- A  $\frac{1}{2}Fr$       B  $Fr$       **C  $2Fr$**       D  $4Fr$

- 13 A uniform square sign of weight  $40\text{ N}$  is suspended vertically from its top edge by a horizontal hinge, as shown.

Moment = force  $\times$  perpendicular distance  
 $6 = 40 \sin \theta \times 0.4$   
 $\theta = 2.2 \cdot 02^\circ$

The hinge is not frictionless. When the sign is displaced from the vertical by an external force and then released, it does not return to the vertical position. Some force is used that brings the sign in a new position in air which is not vertical.  
 The maximum torque exerted by the hinge on the sign is  $6.0\text{ N m}$ . The sign is displaced by  $90^\circ$  so that it is horizontal and then gradually released. When its displaced to a horizontal position & released so that it could go back to its original position but it doesn't due to hinge's friction that holds it in air.  
 At which angle to the vertical does the sign hang after release?  
 A  $11^\circ$       **B  $22^\circ$**       C  $68^\circ$       D  $79^\circ$

- 14 Each foot of an elephant has a circular cross-section with a circumference of  $1.4\text{ m}$ . The elephant has a mass of  $5400\text{ kg}$ .

The elephant is standing still with all four feet on the ground. Assume the pressure under each foot is the same.

What is the approximate pressure exerted on the ground by each of the elephant's feet?

- A  $8.7\text{ kPa}$       B  $35\text{ kPa}$       **C  $85\text{ kPa}$**       D  $340\text{ kPa}$

force/area      force =  $\frac{5400 \times 10}{4} = 13500\text{ N}$  so area =  $\pi r^2$   
 $r = \frac{1.4}{2\pi} \text{ m}$   
 area =  $0.156\text{ m}^2$   
 Pressure =  $\frac{13500}{0.156}$

15 A stone is falling vertically through the air at a constant (terminal) velocity.

Which energy change is occurring?

- A gravitational potential energy to thermal energy  
 B <sup>decreasing</sup> gravitational potential energy to <sup>its constant</sup> kinetic energy of the stone  
 C kinetic energy to gravitational potential energy of the stone  
 D kinetic energy of the stone to thermal energy

height is decreasing so g.p.e is converting into some other

16 An object of weight 12 N rests on a platform on top of a container with two pistons, as shown. The container contains a fixed mass of gas, and the pistons are free to move.

The plunger is slowly pushed 4.0 cm to the right. As a result, the object slowly moves upwards a distance 0.50 cm.

How much work is done on the object?

Ex distance travelled by gas particles in the direction of F  
 $12 \times \frac{0.5}{100}$

- A 0.060 J      B 0.48 J      C 6.0 J      D 48 J

- 17 A constant force  $F$ , acting on a car of mass  $m$ , moves the car up a slope through a distance  $s$  at constant velocity  $v$ . The angle of the slope to the horizontal is  $\alpha$ .

The acceleration of free fall is  $g$ .

What is the ratio  $\frac{\text{gravitational potential energy gained by car}}{\text{work done by force } F}$  ?  $\frac{mgh}{F \times s} = \frac{mg \times s \sin \alpha}{F \times s}$

- A  $\frac{mgs \sin \alpha}{Fv}$     B  $\frac{mv}{Fs}$     C  $\frac{mv^2}{2Fs}$     **D  $\frac{mg \sin \alpha}{F}$**

- 18 What is the definition of power?

- A Power is the product of force and velocity.  
 B Power is the product of force and work done per unit time.  
 C Power is the product of force per unit time and velocity.  
 D Power is the rate at which work is done.

- 19 A steel bar of circular cross-section is under tension  $T$ , as shown.

The diameter of the wide portion is double the diameter of the narrow portion.

What is the value of  $\frac{\text{stress in the wide portion}}{\text{stress in the narrow portion}}$  ?

- A 0.25**    B 0.50    C 2.0    D 4.0

$Area = \frac{\pi d^2}{4}$   
 $stress = \frac{tension}{area}$   
 $stress \text{ in narrow} = \frac{Atension}{\pi}$   
 $stress \text{ in wide} = \frac{Atension}{\pi \cdot 4}$   
 $ratio = \frac{tension}{\pi} \div \frac{4tension}{\pi}$   
 $= \frac{1}{4}$

*Stress  $\propto$  strain  
 $2 \times$  strain  $\propto$  force  $\times 2$   
 area  
 $2 \times$  strain  $\propto$  extension  $\times 2$   
 so initial strain of Y is  
 4 times greater*

20 Two guitar strings are stretched by tensile forces.

String X is stretched by a tensile force  $F$  that causes an extension  $x$ .

String Y is stretched by a tensile force  $2F$  that causes an extension  $2x$ .

The strings obey Hooke's law.

What is the ratio  $\frac{\text{strain energy in stretched string X}}{\text{strain energy in stretched string Y}}$ ?

- A 4                      B 2                      C  $\frac{1}{2}$                       **D  $\frac{1}{4}$**

21 Two lasers emit light in a vacuum. One laser emits red light and the other emits green light.

*different wavelength & frequency due to being in visible spectrum*

Which property of the light from the two lasers must be different?

- ~~A~~ amplitude  
**B** frequency  
~~C~~ intensity  
~~D~~ speed  $3 \times 10^8 \text{ m/s}$

22 Two particles in a progressive wave are a distance 10 cm apart. The two graphs show the variation with time  $t$  of the displacement  $d$  of the two particles.

*The first particle starts from a compression & the second starts with a rarefaction. lets combine both & plot a single graph*

What could be represented by the two graphs?

- A** particles in a longitudinal wave with a compression and the nearest rarefaction separated by 10 cm  
 B particles in a longitudinal wave with a compression and the nearest rarefaction separated by 20 cm  
~~C~~ particles in a transverse wave with a peak and the nearest trough separated by 20 cm  
~~D~~ particles in a transverse wave with two adjacent peaks separated by 10 cm

- 23 A sound wave is detected by a microphone that is connected to a cathode-ray oscilloscope (CRO).

The screen of the CRO displays a waveform, as shown.

The time-base is set to  $20 \mu\text{s div}^{-1}$ .

What is the frequency of the sound wave?

- A 15 Hz      **B 15 000 Hz**      C 20 000 Hz      D 30 000 Hz

- 24 A person stands at the side of a straight railway track. A train moves towards the person and emits sound from its whistle. The person hears a sound of frequency 1690 Hz as the train approaches him.

The person then hears sound of frequency 1500 Hz as the train moves away from him. The speed of sound in air is  $340 \text{ m s}^{-1}$ .

What is the speed of the train?

- A**  $20 \text{ m s}^{-1}$       B  $38 \text{ m s}^{-1}$       C  $41 \text{ m s}^{-1}$       D  $43 \text{ m s}^{-1}$

- 25 Which list shows electromagnetic waves in order of decreasing frequency?

- A gamma-rays → infrared → ultraviolet → radio waves  
**B** gamma-rays → ultraviolet → infrared → radio waves  
~~C~~ radio waves → infrared → ultraviolet → gamma-rays  
~~D~~ radio waves → ultraviolet → infrared → gamma-rays

- 26 A pipe of length  $L$  is open at one end and closed at the other end. A loudspeaker is at the open end and emits a sound wave into the pipe.

$L = \frac{\lambda}{4}$  so  $\lambda = 4L$

$L = \frac{3}{4}\lambda$  so  $\lambda = \frac{4L}{3}$

$L = \frac{5}{4}\lambda$  so  $\lambda = \frac{4L}{5}$

$L = \frac{7}{4}\lambda$  so  $\lambda = \frac{4L}{7}$

When a stationary wave is formed, there is an antinode at the open end of the pipe.

Which wavelength of sound could be used to produce a stationary wave?

A  $\frac{2L}{3}$

B  $L$

**C**  $\frac{4L}{3}$

D  $2L$

- 27 Which diagram best shows how water waves diffract when they pass through a gap in a barrier?

*gap < wavelength  
so greater diffraction*

*$\lambda$  should stay same*

*almost no diffraction when infact gap <  $\lambda$*

28 In a two-source interference experiment, light of a single frequency is incident on a double slit.

The light waves emerging from the slits are **coherent**.

What is meant by *coherent*?

- A The waves are in phase.
- B The waves have a constant phase difference.
- ~~C~~ The waves have the same amplitude.
- ~~D~~ The waves interfere constructively wherever they overlap.

$d \sin \theta = n \lambda$

29 A parallel beam of light consists of light of wavelength 420 nm and light of wavelength 630 nm. *they can interfere destructively to form dark fringe*

The light is incident normally on a diffraction grating.

The diffraction maxima for the two wavelengths *no. of maxima different for both wavelengths* overlap only at an angle of 31° from the direction of the incident light beam.

What could be the **line spacing of the diffraction grating**? *d = ? d and sin θ is constant*

- A 1.2 μm
- B 1.6 μm
- C 2.4 μm
- D 3.7 μm

$n_1 \lambda_1 = n_2 \lambda_2$   
 $\frac{n_1}{n_2} = \frac{630 \times 10^{-9}}{420 \times 10^{-9}} = \frac{3}{2}$   
 means  $n = 3$  for wavelength of 420 nm. Now substitute in the formula  $3 \times 420 \times 10^{-9} = d \sin 31^\circ$

30 A positively charged particle P is in an electric field, as shown.

The field lines (lines of force) are evenly spaced and parallel.

Which statement is correct?

- A Moving P a small distance in any direction will not change the electric force on P.
- ~~B~~ Moving P a small distance in direction Y will increase the electric force on P.
- ~~C~~ Moving P a small distance in direction Z will increase the electric force on P.
- ~~D~~ Moving P a small distance in direction X will increase the electric force on P.

$E = \frac{V}{d}$   
 dist between 2 plates  
 so nothing is changing  
 force is constant everywhere

- 31 The diagram shows two parallel metal plates P and Q, separated by a distance of 5.0 mm. There is a potential difference of 700 V between the plates. Plate Q is earthed.

$$E = \frac{V}{d} = \frac{700}{5 \times 10^{-3}}$$

What is the magnitude and direction of the electric field at point R?

- A  $1.4 \times 10^2 \text{ N C}^{-1}$  from P towards Q  
 B  $1.4 \times 10^2 \text{ N C}^{-1}$  from Q towards P  
 C  $1.4 \times 10^5 \text{ N C}^{-1}$  from P towards Q  
 D  $1.4 \times 10^5 \text{ N C}^{-1}$  from Q towards P
- 32 A wedge-shaped metal conductor of length  $L$ , varying width and uniform thickness is connected to a cell, as shown.

$$R = \frac{\rho L}{A}$$

$$I = nAvq$$

$$V = nAvqL$$

$$\frac{V}{R} = nAvq$$

$$\frac{V}{L} = \frac{I}{A} = nqv$$

$$v \propto \frac{1}{L}$$

Which graph best shows how the average drift velocity  $v$  of electrons in the conductor varies with distance  $x$  from end X?

at  $L = \text{max}$   
 $R = \text{max}$  but  
 $v$  is not zero

- 33 The power output of an electrical supply is 2.4 kW at a potential difference (p.d.) of 240 V. The two wires between the supply and a kettle each have a resistance of  $0.50 \Omega$ , as shown.

What is the power supplied to the kettle and what is the p.d. across the kettle?

|                                    | power / kW | p.d. / V |
|------------------------------------|------------|----------|
| <input checked="" type="radio"/> A | 2.3        | 230      |
| <input type="radio"/> B            | 2.3        | 235      |
| <input checked="" type="radio"/> C | 2.4        | 230      |
| <input checked="" type="radio"/> D | 2.4        | 235      |

- 34 The graph shows the variation with potential difference  $V$  of the current  $I$  in components X, Y and Z.

Which row correctly identifies the components?

|                                    | metallic conductor at constant temperature | semiconductor diode | filament lamp |
|------------------------------------|--|---------------------|---------------|
| <input type="radio"/> A            | X  | Z                   | Y             |
| <input checked="" type="radio"/> B | Y  | X                   | Z             |
| <input type="radio"/> C            | Y  | Z                   | X             |
| <input type="radio"/> D            | Z  | Y                   | X             |

35 A wire of resistance  $9.55\ \Omega$  has a diameter of  $0.280\ \text{mm}$ .  $R = 9.55$   $A = 6.158 \times 10^{-8}$

It is made of metal of resistivity  $4.90 \times 10^{-7}\ \Omega\text{m}$ .  $P = 4.9 \times 10^{-7}$

What is the length of the wire?

- (A) 1.20 m      B 4.80 m      C 19.0 m      D 76.0 m
- $l = \frac{RA}{P}$

36 A cell of constant electromotive force (e.m.f.) but with internal resistance is connected to a fixed resistor  $R$  using a potentiometer. A voltmeter measures the potential difference (p.d.) between the terminals of the cell.

Which statement explains the change to the reading of the voltmeter as contact  $Z$  is moved towards end  $X$  of the potentiometer? *resistor Z divides into 2 with the bottom one having less resistance*

- A The voltmeter reading decreases because the current through the cell decreases.
- B The voltmeter reading decreases because the current through the cell increases.
- (C) The voltmeter reading increases because the current through the cell decreases.
- D The voltmeter reading increases because the current through the cell increases.

37 A cell of electromotive force (e.m.f.)  $E$  and negligible internal resistance is connected to a circuit.

The circuit has currents  $I_1$ ,  $I_2$  and  $I_3$ , and potential differences  $V_1$ ,  $V_2$  and  $V_3$ , as shown.

Which equation represents a statement of Kirchhoff's first law?

- (A)  $I_1 = I_2 + I_3$       B  $I_1 = I_2 = I_3$        C  $E = V_1 + V_2$        D  $V_1 = V_2 = V_3$

- 38 Two resistors are connected in series with a 6.0 V power supply, as shown.

$$V_{out} = V_{in} \times \frac{R_1}{R_1 + R_2}$$

$R_1$  in this case is  $12 \text{ k}\Omega$

$$1 = \frac{6 \times 12000}{12000 + R_2}$$

$$R_2 = 60,000 \Omega$$

What is the resistance of the variable resistor R to give a potential difference of 1.0 V across the  $12 \text{ k}\Omega$  resistor?

- A  $2.0 \text{ k}\Omega$       B  $10 \text{ k}\Omega$       C  $60 \text{ k}\Omega$       D  $72 \text{ k}\Omega$
- 39 A nucleus of magnesium decays into a nucleus X by emitting a  $\beta^+$  particle. The decay is represented by the equation shown.

What are the values of P and Q?

|   | P  | Q  |
|---|----|----|
| A | 22 | 11 |
| B | 22 | 13 |
| C | 23 | 11 |
| D | 23 | 13 |

- 40 In  $\beta^-$  decay, a neutron inside a nucleus changes to a proton,  ${}_0^1\text{n} \rightarrow {}_1^1\text{p} + \bar{\nu} + {}_0^{-1}\beta$

$udd \rightarrow uud$

Which statement describes the quark composition of the nucleus during the decay?

- A The number of down quarks decreases by one.
- B The number of down quarks increases by one.
- C The number of down quarks stays the same.
- D The number of up quarks stays the same.
