Paper 1 Multiple Choice

May/June 2021

1 hour 15 minutes

You must answer on the multiple choice answer sheet.

You will need: Multiple choice answer sheet
Soft clean eraser
Soft pencil (type B or HB is recommended)

INSTRUCTIONS

- There are **forty** questions on this paper. Answer **all** questions.
- For each question there are four possible answers **A, B, C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do **not** use correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.

INFORMATION

- The total mark for this paper is 40.
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.

This document has **20** pages. Any blank pages are indicated.

Data

speed of light in free space	$c = 3.00 \times 10^8 \text{ m s}^{-1}$
permeability of free space	$\mu_0 = 4\pi \times 10^{-7} \text{ H m}^{-1}$
permittivity of free space	$\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$ $(\frac{1}{4\pi\epsilon_0} = 8.99 \times 10^9 \text{ m F}^{-1})$
elementary charge	$e = 1.60 \times 10^{-19} \text{ C}$
the Planck constant	$h = 6.63 \times 10^{-34} \text{ J s}$
unified atomic mass unit	$1 \text{ u} = 1.66 \times 10^{-27} \text{ kg}$
rest mass of electron	$m_e = 9.11 \times 10^{-31} \text{ kg}$
rest mass of proton	$m_p = 1.67 \times 10^{-27} \text{ kg}$
molar gas constant	$R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$
the Avogadro constant	$N_A = 6.02 \times 10^{23} \text{ mol}^{-1}$
the Boltzmann constant	$k = 1.38 \times 10^{-23} \text{ J K}^{-1}$
gravitational constant	$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$
acceleration of free fall	$g = 9.81 \text{ m s}^{-2}$

Formulae

uniformly accelerated motion	$s = ut + \frac{1}{2}at^2$ $v^2 = u^2 + 2as$
work done on/by a gas	$W = p\Delta V$
gravitational potential	$\phi = -\frac{Gm}{r}$
hydrostatic pressure	$p = \rho gh$
pressure of an ideal gas	$p = \frac{1}{3} \frac{Nm}{V} \langle c^2 \rangle$
simple harmonic motion	$a = -\omega^2 x$
velocity of particle in s.h.m.	$v = v_0 \cos \omega t$ $v = \pm \omega \sqrt{(x_0^2 - x^2)}$
Doppler effect	$f_o = \frac{f_s v}{v \pm v_s}$
electric potential	$V = \frac{Q}{4\pi\epsilon_0 r}$
capacitors in series	$1/C = 1/C_1 + 1/C_2 + \dots$
capacitors in parallel	$C = C_1 + C_2 + \dots$
energy of charged capacitor	$W = \frac{1}{2}QV$
electric current	$I = Anvq$
resistors in series	$R = R_1 + R_2 + \dots$
resistors in parallel	$1/R = 1/R_1 + 1/R_2 + \dots$
Hall voltage	$V_H = \frac{BI}{ntq}$
alternating current/voltage	$x = x_0 \sin \omega t$
radioactive decay	$x = x_0 \exp(-\lambda t)$
decay constant	$\lambda = \frac{0.693}{t_{\frac{1}{2}}}$

1 What is a reasonable estimate of the kinetic energy of an Olympic athlete sprinting in a 100 m race?

- A 40 J B 400 J **C 4000 J** D 40 000 J

2 What is a unit of momentum? $\text{mass} \times \text{velocity} = \frac{\text{force}}{\text{acceleration}} \times \text{velocity} = \frac{\text{N}}{\text{ms}^{-2}} \times \text{ms}^{-1} = \text{Ns}$

- A kg ms^{-2} B Ns^{-1} **C Ns** D kg sm^{-1}

3 What is the **horizontal component** of the force shown?

- A 12 N** B 16 N C 25 N D 27 N

4 The diagram shows two readings on a micrometer.

Always multiply thimble scale reading with 0.01

$$1.5 + (12 \times 0.01) = 1.62 \text{ mm} \quad \text{reading 1}$$

$$13 + (46 \times 0.01) = 13.46 \text{ mm} \quad \text{reading 2}$$

What is the difference between the two readings?

- A 10.34 mm **B 11.84 mm** C 12.34 mm D 12.84 mm

5 The **diameter of a circular** disc is measured as (7.0 ± 0.1) mm. $\frac{0.1}{7} \times 100\%$ & diameter has a % uncertainty of 1.428

What is the **area of the disc** and the **absolute uncertainty in the area**?

	area of disc / mm^2	absolute uncertainty / mm^2
A	38.5	± 0.5
B	38	± 1
C	154	± 2
D	154	± 4

$$\text{Area} = \frac{\pi d^2}{4} = 38.4845 \text{ mm}^2 \text{ with a total } \text{\% uncertainty of } (1.428 \times 2) = 2.86\%$$

bcz diameter is x2 in the formula

$$\text{Now absolute uncertainty of the area is } \frac{2.86}{100} \times 38.4845 = 1.1\% \approx 1\%$$

- 6 The diagram shows a velocity–time graph for a car.

What is the distance travelled during the first 4.0 s?

- A 2.5 m B 3.0 m C 20 m **D 28 m**

- 7 A steel ball is dropped from rest from a height h above the ground. The ball hits the ground after a time t .

This is repeated for a number of different heights.

The graph shows the variation of h with t^2 for the ball.

$$s = ut + \frac{1}{2}at^2$$

$$h = \frac{1}{2}at^2 \quad \& \quad \frac{2h}{t^2} = a \text{ where}$$

$$\frac{h}{t^2} = G \text{ so } a = 2G$$

The gradient of the graph is G .

Which expression gives the acceleration of the ball?

- A $\frac{G}{2}$ B G **C $2G$** D G^2

- 8 Two masses, M and m , are connected by an inextensible string which passes over a frictionless pulley. Mass M rests on a frictionless slope, as shown.

$Mg \sin \theta > T$ where $T = mg$ (from mass m)
 so $Mg \sin \theta > mg$ \therefore
 $\sin \theta > \frac{m}{M}$
 (from mass m)
 bez its NOT
 the one
 accelerating

The slope is at an angle θ to the horizontal.

The two masses are initially held stationary and then released. Mass M accelerates down the slope.

Which expression **must** be correct?

- A $\sin \theta < \frac{m}{M}$ B $\cos \theta < \frac{m}{M}$ **C** $\sin \theta > \frac{m}{M}$ D $\cos \theta > \frac{m}{M}$

- 9 The weights and masses of four different objects on the surfaces of four different planets are shown.

Which planet has the lowest value of acceleration of free fall at its surface?

	weight	mass
A	40 mN	6.0 g
B	3.0 N	500 g
C	10 N	1 kg
D	2.6 kN	750 kg

$40 \times 10^{-3} = 6 \times 10^{-3} \times g$ so $g = 6.67 \text{ N kg}^{-1}$
 $3 = 500 \times 10^{-3} g$ so $g = 6 \text{ N kg}^{-1}$
 $g = 10 \text{ N kg}^{-1}$
 $g = 3.47 \text{ N kg}^{-1}$

- 10 A rock in deep space is travelling towards a distant star and collides with a stationary spacecraft.

What is **not** a possible outcome of the collision?

A The rock becomes stationary and the spacecraft moves towards the star.

- B** The rock moves away from the star and so does the spacecraft. why would stationary spacecraft move backwards instead of going forward
- C The rock moves away from the star and the spacecraft moves towards the star.
- D The rock moves towards the star and so does the spacecraft.

11 A steel ball is falling at a **constant (terminal) speed** in still air. The **forces acting on the ball are upthrust, viscous drag and weight.**

What is the order of **increasing magnitude of these** three forces?

- A upthrust → viscous drag → weight
- B viscous drag → upthrust → weight
- C viscous drag → weight → upthrust
- D weight → upthrust → viscous drag

Upthrust in air is a small force bec of air not being very dense

12 What is **a couple**?

- A a pair of equal forces acting in the ~~same~~ direction but along different lines
- B a pair of forces that are equal and opposite but acting along different lines
- C a pair of forces that produce ~~no~~ resultant force and no resultant moment
- D a pair of ~~unequal~~ forces acting in opposite directions but along the same line

13 Four coplanar forces act on a rigid rod, as shown. The **rod is hinged at P.**

Which force **produces the greatest moment about point P?**

- 14 A book of weight W has a rectangular shape and is of uniform thickness. The book is held in a vertical plane so that the longer sides of the book are vertical, as shown.

Which expression gives the approximate torque exerted by the hand on the book?

- A $\frac{Wa}{2}$ clockwise
- B $\frac{Wb}{2}$ anticlockwise
- C Wa clockwise
- D Wb anticlockwise

- 15 The derivation of the pressure equation $\Delta p = \rho g \Delta h$ uses a number of relationships between quantities.

Which relationship is **not** used in the derivation of this equation?

- A density = $\frac{\text{mass}}{\text{volume}}$ ✓
- B potential energy = mass \times acceleration of free fall \times height
- C pressure = $\frac{\text{force}}{\text{area}}$ ✓
- D weight = mass \times acceleration of free fall ✓

$$V = A \times l$$

$$\begin{aligned} \text{Pressure} &= \frac{\text{force}}{\text{area}} \\ &= \frac{\text{mass} \times \text{acceleration}}{\text{volume/length}} \\ &= \text{length} \times \text{acceleration} \times \frac{\text{mass}}{\text{volume}} \\ &= \text{length} \times g \times \text{density} \end{aligned}$$

- 16 A spring is initially neither compressed nor extended.

A force can be applied to this spring so that it is either compressed to a shorter length or extended to a longer length.

What is the change in the elastic potential energy in the spring when it is extended and when it is compressed?

	change in the elastic potential energy	
	spring is extended	spring is compressed
A	decreases X	decreases X
B	decreases X	increases
C	increases	decreases X
D	increases ✓	increases ✓

The bigger the extension or compression the more the energy

- 17 A sample of gas is sealed in a cylinder by a piston. The frictionless piston is free to move, so that the pressure of the gas remains constant at $1.80 \times 10^5 \text{ Pa}$.

The gas initially occupies a volume of $2.40 \times 10^{-4} \text{ m}^3$.

The gas now does 14.4 J of work.

What is the volume of the gas after doing this work?

- A $0.80 \times 10^{-4} \text{ m}^3$
 B $1.60 \times 10^{-4} \text{ m}^3$
C $3.20 \times 10^{-4} \text{ m}^3$
 D $4.00 \times 10^{-4} \text{ m}^3$

Work done by gas = pressure \times change in volume

$$14.4 = 1.8 \times 10^5 \times \text{change in volume}$$

$$\Delta V = 8 \times 10^{-5} \text{ so this means}$$

$$\text{final volume} = 8 \times 10^{-5} + 2.4 \times 10^{-4}$$

18 A car of mass 500 kg is at rest at point X on a slope, as shown.

The car's brakes are released and the car rolls down the slope with its engine switched off. At point Y the car has moved through a vertical height of 30 m and has a speed of 11 ms⁻¹.

What is the energy dissipated by frictional forces when the car moves from X to Y?

- A $3.0 \times 10^4 \text{ J}$ **B** $1.2 \times 10^5 \text{ J}$ C $1.5 \times 10^5 \text{ J}$ D $1.8 \times 10^5 \text{ J}$

19 Which expression cannot be used to calculate power?

- A $\frac{\text{force} \times \text{displacement}}{\text{time}} = \frac{\text{energy}}{\text{time}}$
 B force \times velocity
 C $\frac{\text{work done}}{\text{time}}$
D work done \times velocity

20 The stress σ in a material is given by the equation shown.

$$\sigma = \frac{F}{A}$$

The strain ϵ in the same material is given by the equation shown.

$$\epsilon = \frac{x}{L}$$

$$Y.M = \frac{\text{stress}}{\text{strain}} = \frac{F \times L}{A \times x} \text{ or } \frac{\sigma}{\epsilon} \text{ or } \frac{F}{A\epsilon}$$

Which expression gives the Young modulus of the material?

- ~~A~~ $\frac{\epsilon}{\sigma}$ ~~B~~ $\frac{Fx}{AL}$ ~~C~~ $\frac{\sigma x}{L}$ **D** $\frac{F}{A\epsilon}$

- 21 What is an example of plastic deformation? *permanently distorted*
- A rubber ball is momentarily compressed every time it hits the ground. *it compresses & comes back to its original state*
- A spoon stirring some coffee in a ceramic mug hits its surface and makes a clinking sound.
- A toolbox is left on a horizontal plank. When the toolbox is removed, the plank is no longer straight. *it has been permanently distorted that's why isn't going back to its original position*
- The spring in some bathroom weighing scales is compressed by a person standing on the scales. *When the man gets off the scales, spring goes back to its original position*

- 22 A transverse progressive wave of wavelength λ is set up on a stretched string. The graph shows the variation of displacement y with distance x at a particular instant of time. The wave has displacement $+y_1$ at distance $x = \frac{\lambda}{8}$.

What are the next two values of x where the displacement y is again equal to $+y_1$?

- $\frac{3\lambda}{8}$ and $\frac{5\lambda}{8}$
- $\frac{3\lambda}{8}$ and $\frac{9\lambda}{8}$
- $\frac{5\lambda}{8}$ and $\frac{9\lambda}{8}$
- $\frac{9\lambda}{8}$ and $\frac{17\lambda}{8}$

- 23 The graph shows the variation with time of the displacement of an air particle as a progressive sound wave passes through the air. The speed of sound in air is 330 ms^{-1} .

What is the wavelength of the wave? $\lambda = \frac{c}{f}$ where $f = \frac{1}{T}$ so $\lambda = cT = 330 \times 20 \times 10^{-3}$

- (A) 6.6 m B 8.3 m C 20 m D 25 m

- 24 A microphone is connected to a cathode-ray oscilloscope (CRO). A sound wave of constant frequency is detected by the microphone. The screen of the CRO is shown.

The time-base is set at 1.0 ms cm^{-1} .

What is the frequency of the sound wave? $f = \frac{1}{T}$

- (A) 250 Hz B 500 Hz C 670 Hz D 4000 Hz

$f_s = 500$

$v_s = 20$

- 25 A train's whistle is emitting sound of frequency 500 Hz as the train moves with a speed of 20 ms^{-1} along a straight track. The train moves directly towards a stationary observer standing next to the track and then passes the observer.

The speed of sound in air is 330 ms^{-1} .

$f_o = \frac{f_s \times v}{v \pm v_s}$

What is the difference between the frequencies of the sound heard by the observer before and after the train has passed the observer?

- A 29 Hz B 32 Hz C 40 Hz (D) 61 Hz

f_o when its approaching = $\frac{500 \times 330}{330 - 20} = 532.3 \text{ Hz}$

f_o when its moving away = $\frac{500 \times 330}{330 + 20} = 471.4 \text{ Hz}$

$\Delta f_o = 532.3 - 471.4 = 61 \text{ Hz}$

26 Gamma-rays, microwaves, visible light and X-rays are four regions of the electromagnetic spectrum.

Which list shows these four regions *decreasing frequency* in order of increasing wavelength?

- A microwaves → visible light → X-rays → gamma-rays
- B gamma-rays → X-rays → visible light → microwaves
- C X-rays → gamma-rays → microwaves → visible light
- D microwaves → visible light → gamma-rays → X-rays

27 To produce a stationary wave, two waves must travel in opposite directions through the same space.

Which statement about the properties of the two waves must also be correct?

- A The waves must have equal frequencies, but different speeds and wavelengths.
- B The waves must have equal speeds, but different wavelengths and frequencies.
- C The waves must have equal speeds, frequencies and wavelengths.
- D The waves must have equal wavelengths, but different speeds and frequencies.

28 The speed of sound in air is 330 ms^{-1} . $c = f\lambda$ ξ $\frac{330}{0.44 \times 10^3} = 0.75 \text{ m}$ of λ ξ a λ means a complete wave

Which size of architectural features in a large concert hall would best diffract sound waves of frequency 0.44 kHz?

- A 1.3 mm
- B 750 mm
- C 7.5 m
- D 17 m

29 A double-slit interference pattern using red light of wavelength $7.0 \times 10^{-7} \text{ m}$ has a fringe spacing of 3.5 mm. $x = 3.5 \times 10^{-3} \text{ m}$

Which fringe spacing would be observed for the same arrangement of apparatus but using blue light of wavelength $4.5 \times 10^{-7} \text{ m}$? where slit spacing ξ distance from slits to mirror is the same

- A 2.3 mm
- B 3.5 mm
- C 5.4 mm
- D 9.0 mm

$$\frac{x_1}{\lambda_1} = \frac{x_2}{\lambda_2} \quad \xi$$

$$\frac{3.5 \times 10^{-3}}{7 \times 10^{-7}} = \frac{x_2}{4.5 \times 10^{-7}} \quad \text{so } x = 2.25 \times 10^{-3} \text{ m or } 2.3 \text{ mm}$$

30 A beam of light of a single wavelength is incident normally on a diffraction grating.

The angle of diffraction θ is measured for each order of diffraction n . The distance between adjacent slits in the diffraction grating is d .

A graph is plotted to determine the wavelength of the light.

$$n\lambda = d\sin\theta$$

$$\lambda = \frac{d\sin\theta}{n}$$

Which graph should be plotted and how is the wavelength determined from the graph?

	y-axis	x-axis	wavelength
A	n	$d\sin\theta$	gradient = $\frac{n}{d\sin\theta}$
B	n	$d\sin\theta$	1/gradient ✓
C	$\sin\theta$	d/n	gradient
D	$\sin\theta$	$d \times n$	1/gradient

31 A particle has a charge of $+2.0 \text{ mC}$ and is in a vertical uniform electric field. An electric force of $1.0 \times 10^{-2} \text{ N}$ acts upwards on the particle.

What is the electric field strength? $\frac{F}{Q}$

- ~~A~~ 0.20 V m^{-1} downwards
- ~~B~~ 0.20 V m^{-1} upwards
- ~~C~~ 5.0 V m^{-1} downwards
- D** 5.0 V m^{-1} upwards

32 The diagram shows two parallel metal plates connected to a d.c. power supply through a resistor.

There is a uniform electric field in the region between the plates.

Which change would cause a decrease in the strength of the electric field?

- A** a small increase in the distance between the plates
- ~~B~~ a small increase in the potential difference between the plates
- ~~C~~ a small increase in the resistance of the resistor
- ~~D~~ a small increase to the area of both plates

$$EFS = \frac{F}{Q} \text{ or } \frac{V}{d} = EFS \downarrow$$

33 A wire has a length of 12 cm and contains a total of 5.1×10^{22} free electrons.

$$A = \frac{V}{l}$$

When a potential difference is applied across the ends of the wire, the free electrons move with an average drift speed of $4.0 \times 10^{-6} \text{ ms}^{-1}$.

$$I = nAvq$$

$n = \frac{\text{no. of total free electrons}}{V}$

$$I = \frac{5.1 \times 10^{22}}{12 \times 10^{-2}} \times \frac{1}{12 \times 10^{-2}} \times 4 \times 10^{-6} \times 1.6 \times 10^{-19}$$

What is the current in the wire?

- A 0.0027 A B 0.0039 A **C 0.27 A** D 0.39 A

34 A battery is marked 9.0 V.

What does this mean?

- A** Each coulomb of charge from the battery supplies 9.0 J of electrical energy to the whole circuit.
 B The battery supplies 9.0 J of electrical energy to an external circuit for each coulomb of charge.
 C The potential difference across any component connected to the battery will be 9.0 V.
 D There will always be a potential difference of 9.0 V across the battery terminals.

35 The diagram shows a circuit containing two batteries connected together.

Total emf = $12 - 8 = 4 \text{ V}$
 Total resistance = 1.5Ω
 $I = \frac{4}{1.5}$

What is the current I ?

- A 2.7 A** B 4.0 A C 8.0 A D 13 A

36 The circuit shown includes a cell of constant internal resistance and an external resistor R.

but if

\textcircled{A} would then be $\frac{6}{1.5} = 4\text{A}$ ϵ
 $\textcircled{V} = (4 \times 1.5) = 6\text{V}$

combined resistance

A student records the ammeter and voltmeter readings. She then connects a second identical external resistor in parallel with the first external resistor.

What happens to the ammeter reading and to the voltmeter reading?

	ammeter reading	voltmeter reading
A	decreases	decreases
B	decreases	stays the same
C	increases	decreases
D	increases	stays the same

37 A battery of electromotive force (e.m.f.) E and negligible internal resistance is connected to four resistors of resistances R_1 , R_2 , R_3 and R_4 .

$V_1 = V_2$
 $(R_1 + R_2)I_1 = I_2(R_3 + R_4)$

$E = V_1 \ \& \ E = V_2$

The currents I_1 and I_2 in the resistors are as shown.

Which equation is correct?

- ~~A~~ $0 = I_1(R_1 + R_2) + I_2(R_3 + R_4)$
- B** $0 = I_1(R_1 + R_2) - I_2(R_3 + R_4)$
- ~~C~~ $E = I_1(R_1 + R_2) + I_2(R_3 + R_4)$
- ~~D~~ $E = I_1(R_1 + R_2) - I_2(R_3 + R_4)$

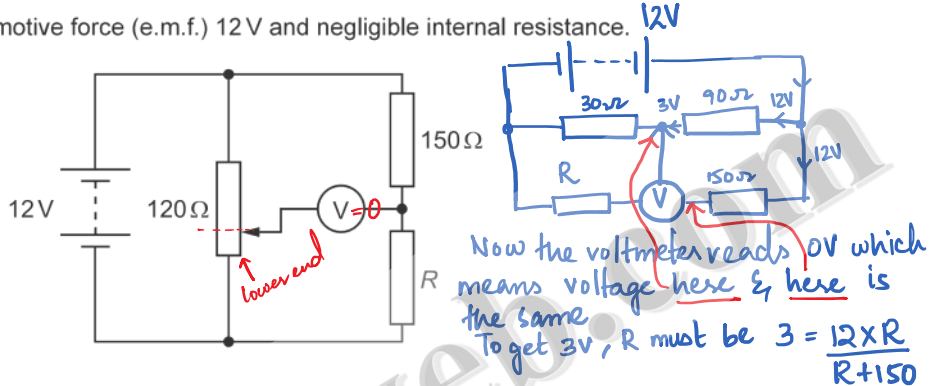

$$\frac{12 \times 90}{90 + 30} = 9V \text{ is p.d across } 90\Omega$$

- 38 In the circuit shown, a potentiometer of total resistance 120Ω is connected in parallel with a resistor of resistance 150Ω and a resistor of resistance R .

The battery has electromotive force (e.m.f.) $12V$ and negligible internal resistance.

potentiometer is $\frac{1}{4}$ of the way means $\frac{120\Omega}{4}$ is divided into these 2

30Ω — \mathcal{E} — 90Ω

The voltmeter reads 0V when the slider of the potentiometer is $\frac{1}{4}$ of the way from its lower end, as shown.

What is resistance R ?

- A 30Ω B 38Ω **C** 50Ω D 450Ω

- 39 A beam of α -particles is incident on a thin gold foil. One α -particle collides head-on with a gold nucleus and is deflected back along its original path.

Which statement could explain why the recoil speed of the gold nucleus is small compared with the recoil speed of the α -particle?

- ~~A~~ Most α -particles are only slightly deflected as they pass through the gold foil.
- ~~B~~ The α -particle and the gold nucleus repel each other. *correct but this doesnt explain speed change*
- C** The mass of the gold nucleus is much greater than the mass of the α -particle.
- ~~D~~ The momentum of the α -particle decreases as it approaches the gold nucleus.

- 40 A hadron is composed of three quarks. The hadron has a charge.

What is a possible quark composition of the hadron?

- ~~A~~ down, down, up *charge = 0*
- ~~B~~ down, up, strange *charge = 0*
- ~~C~~ up, strange, strange *charge = 0*
- D** up, up, strange *charge = 1*
